

# The Current Status of MUSE

EINN 2017 Pre-Conference

Ethan Cline

# Overview

1. How we got here
2. Where we are
3. What's next

# MUSE

- Simultaneous elastic  $\mu\text{P}$  and  $\text{eP}$  scattering
- Extract radius from measured cross section
- Test lepton universality
- Measure relative cross sections
- Experiment done at Paul Scherrer Institute's HIPA, PiM1 secondary beamline

# MUSE at PSI

590 MeV proton  
accelerator. We use the  
secondary beam line with a  
2.2 mA current. 50.6 MHz  
frequency

# Experimental Setup

## Achieved Goals

- Verified timing resolution and efficiency of Beam  
Hodoscope
- Scattered particle scintillator (SPS) is being commissioned
- Tracks from GEMs to Straw Tube Tracker (STT) have been  
visualized
- Demonstrated removal of pion events in trigger and  
pattern matching for scattered particles

# Scattered Particle Scintillator

# Trigger - 161 MeV/c

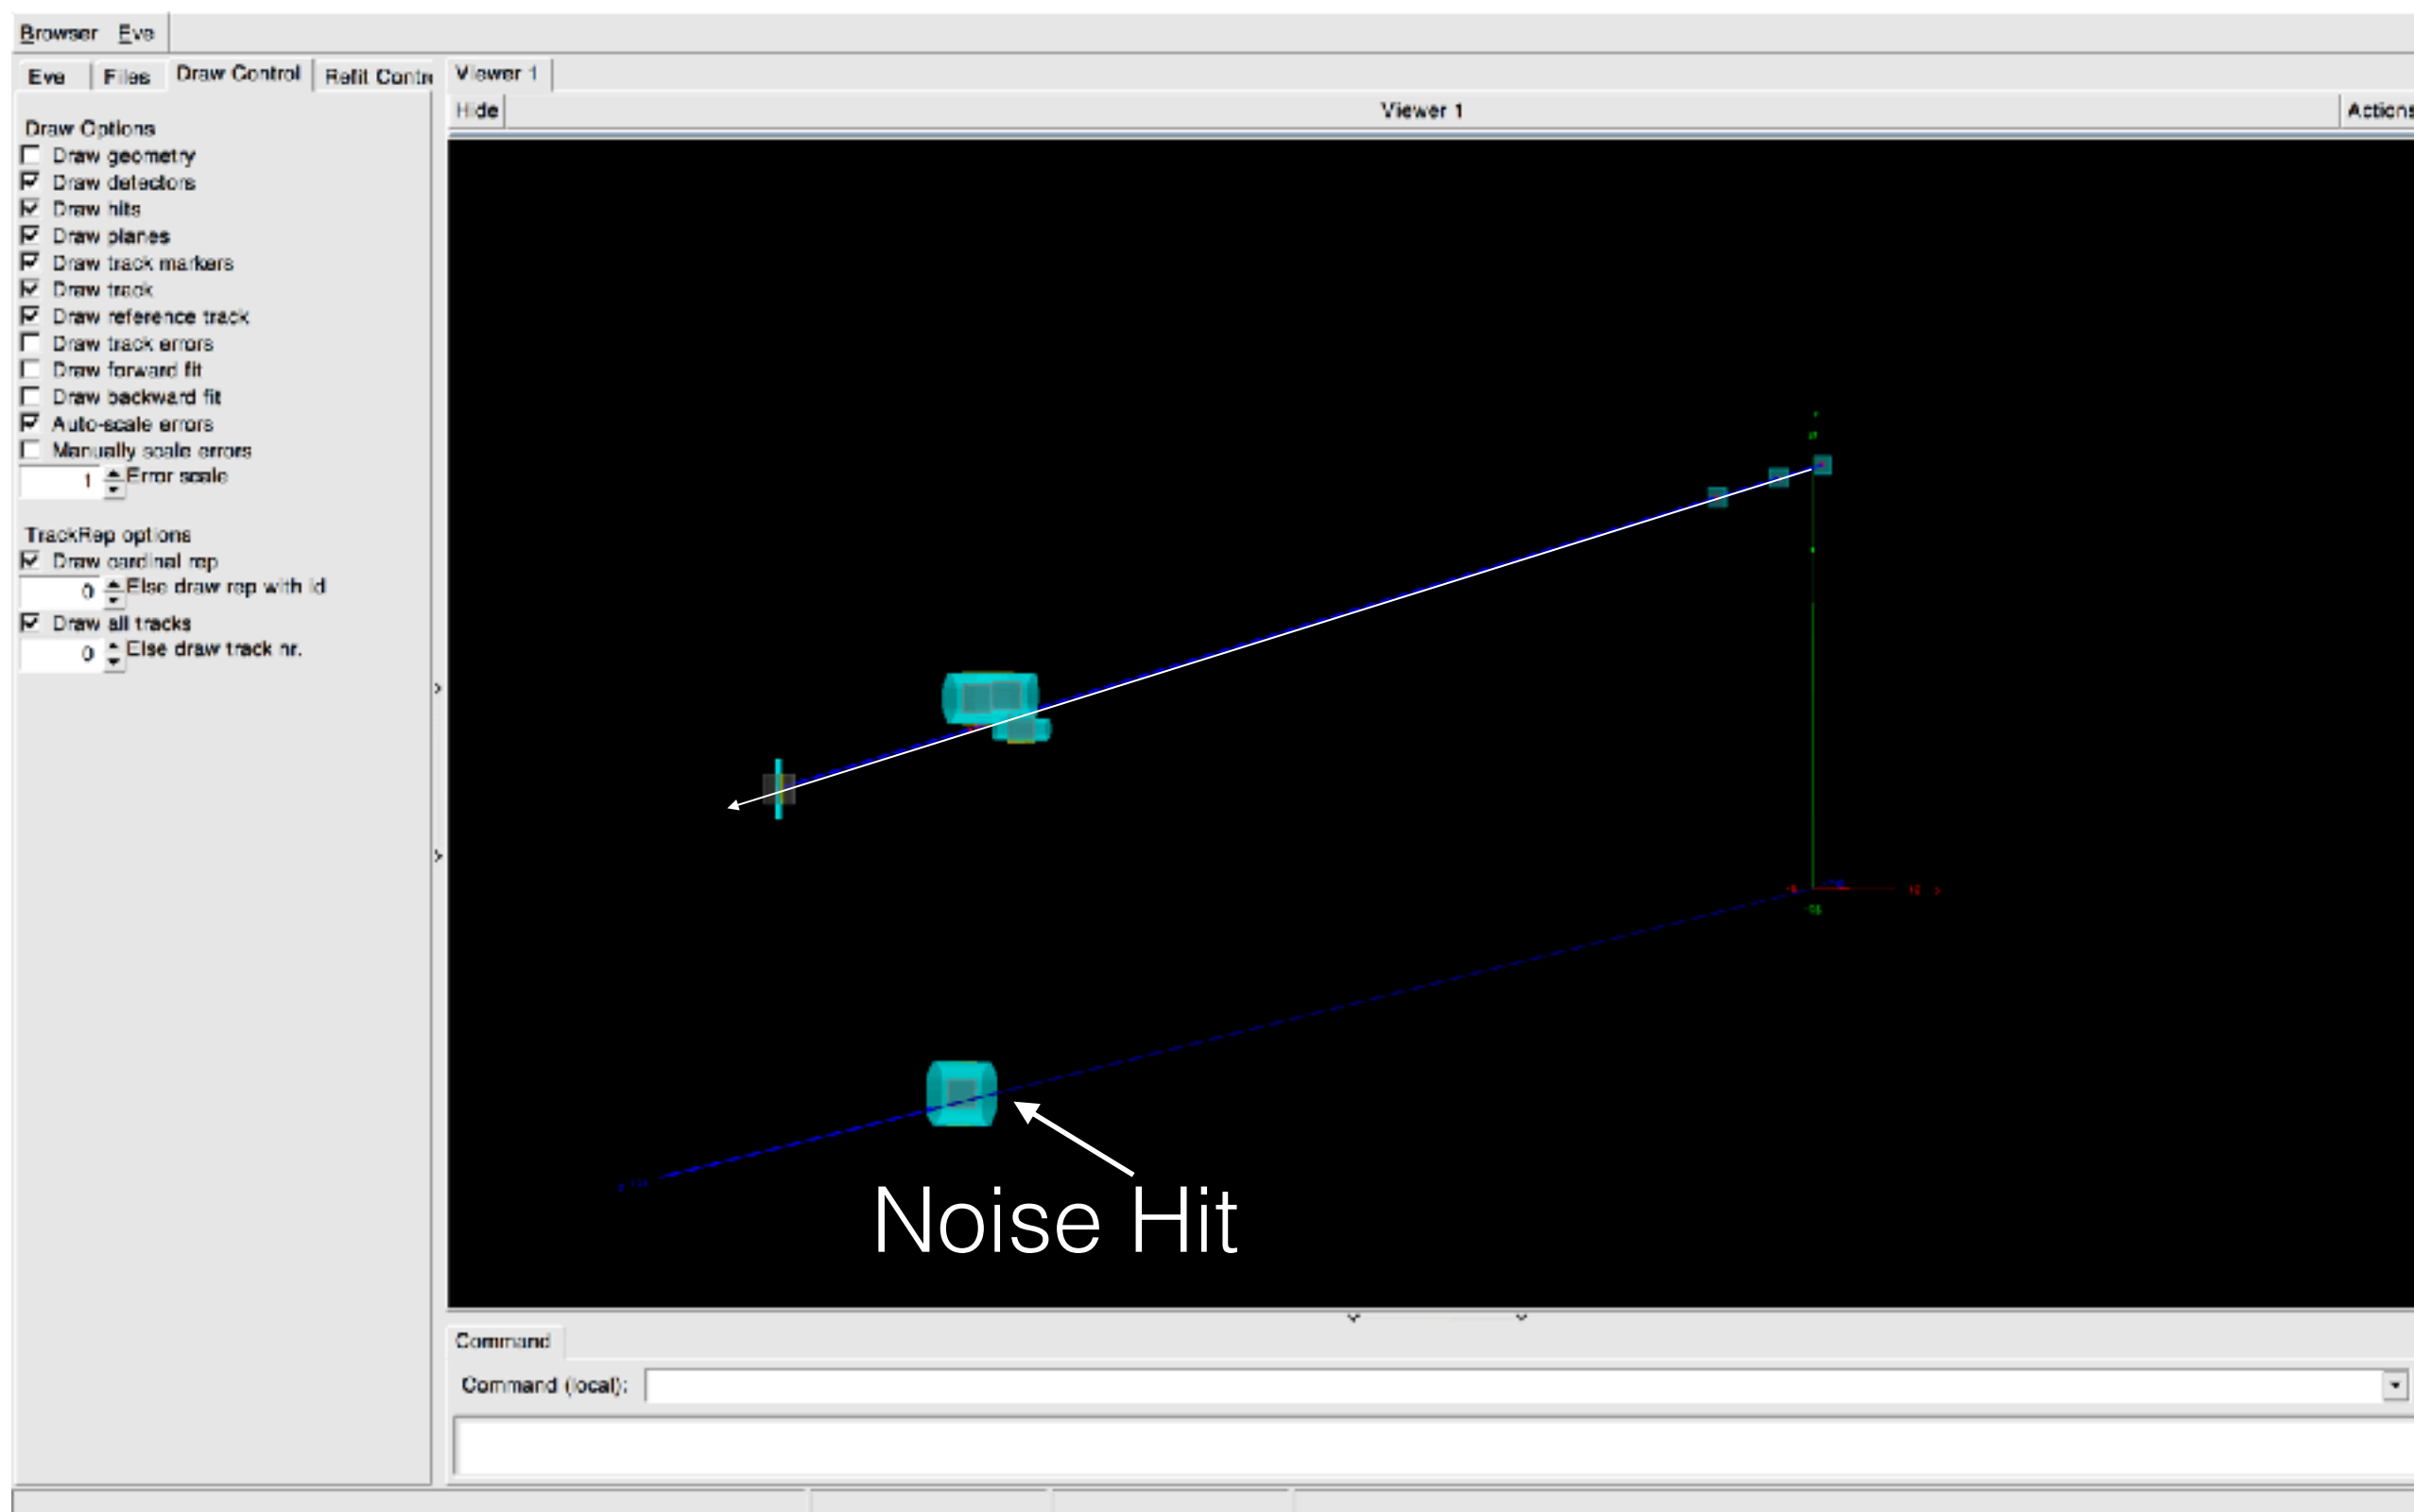

# Trigger - 161 MeV/c

SiPM PID

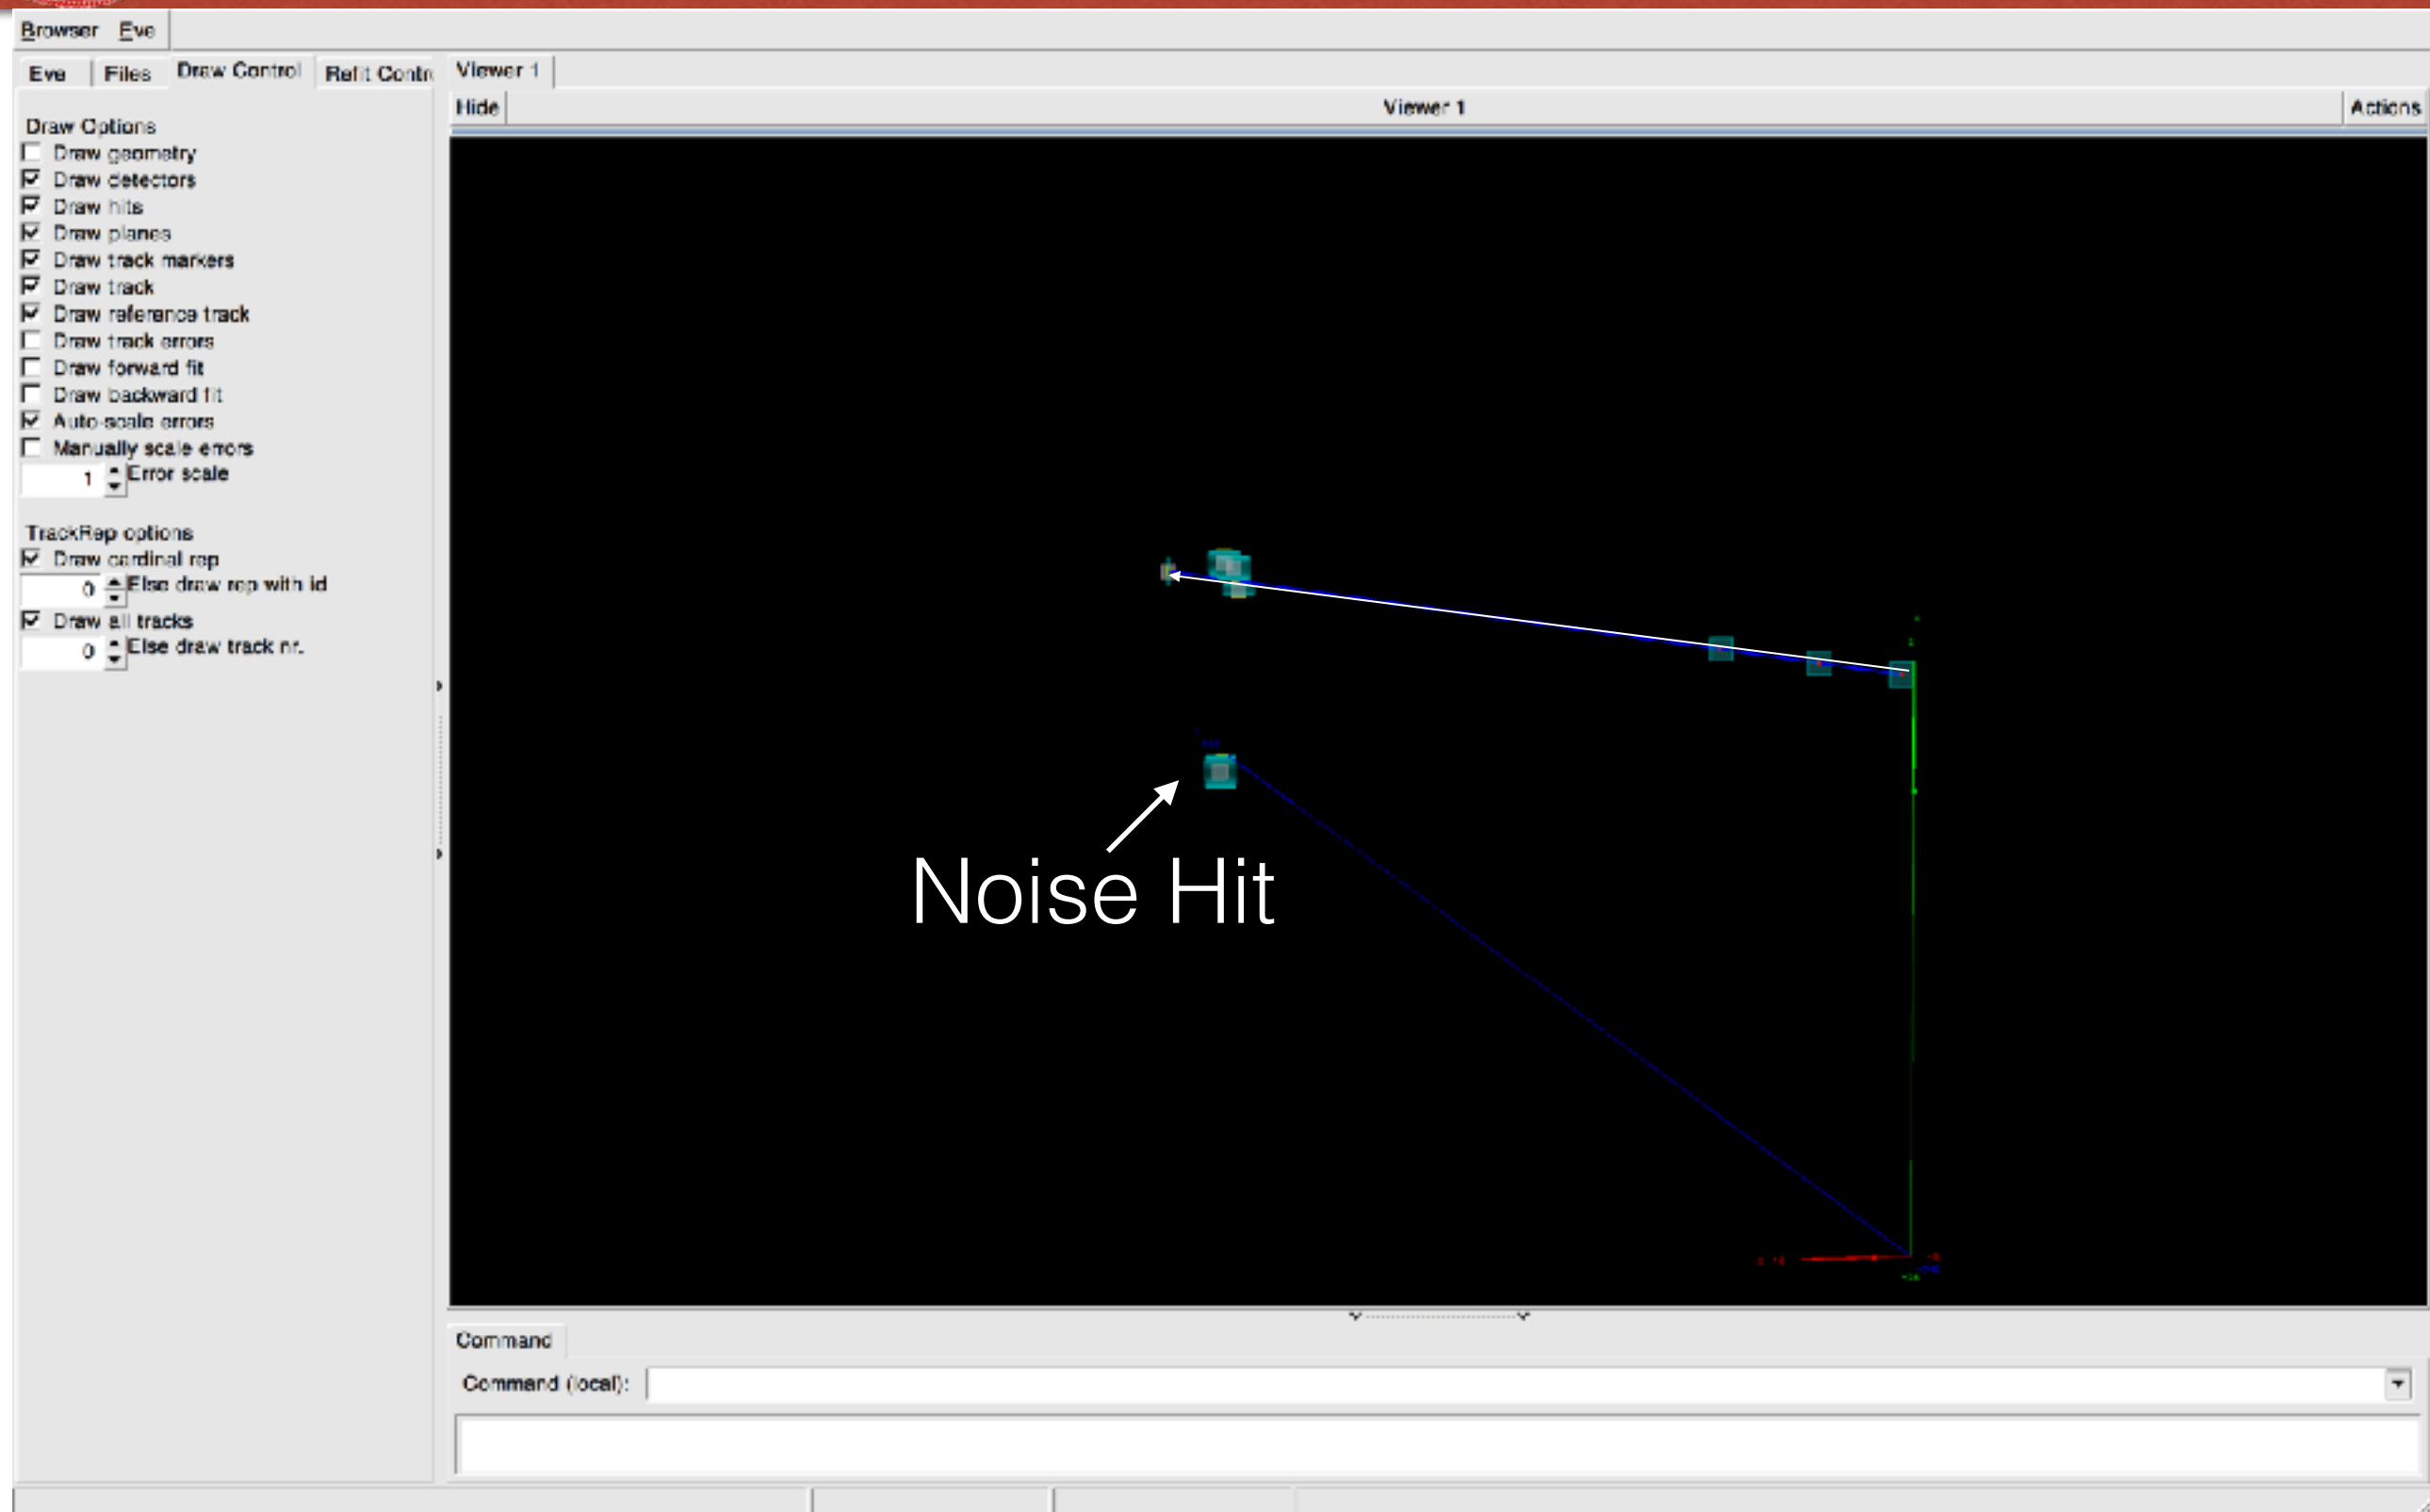

# Tracks

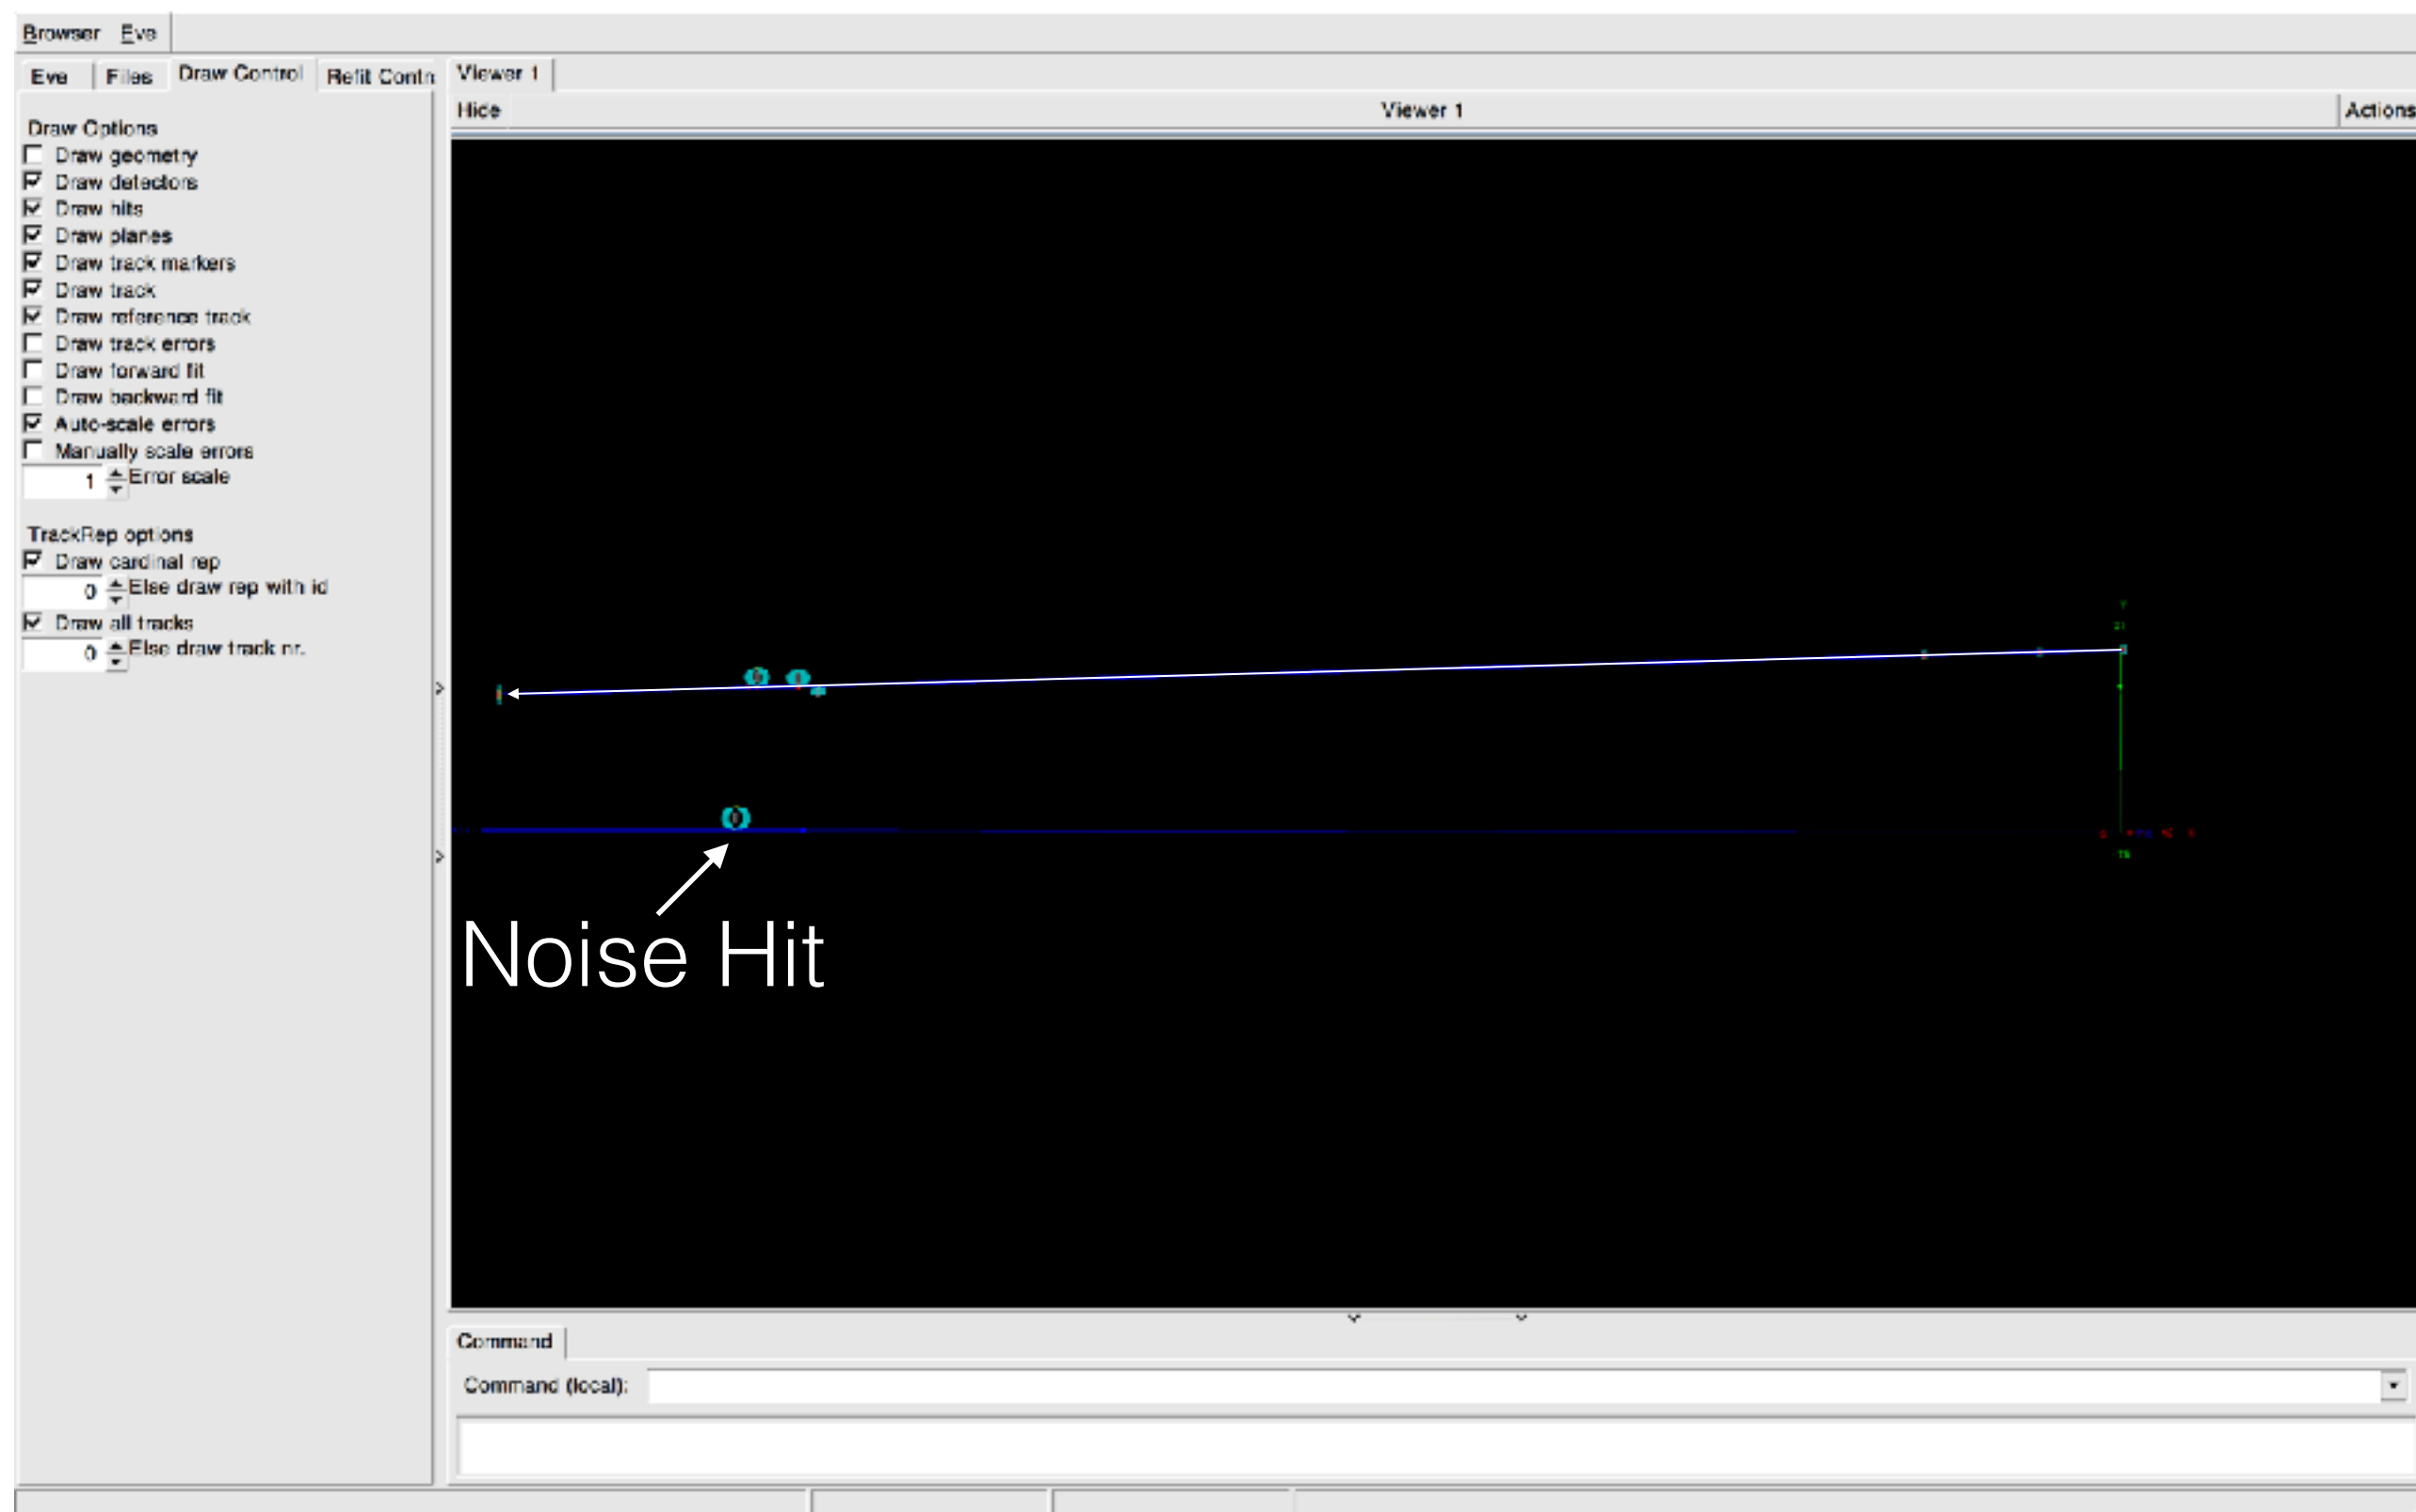

# Tracks

# Tracks

## Current Work

- As we speak the SPS is being verified with cosmics
- Detailed trigger efficiency tests
- GEM readout speed increases
- Preparing for STT assembly

# SPS

# SPS

# SPS

# Current PiM1 Area Setup

# Current PiM1 Area Setup

# Current PiM1 Area Setup

# Future Work for the Installation and Dry Run

- The SPS will be verified in beam this week
  - TOF resolution will be measured
- STT assembly next week
- Calibration runs with GEMs
  - Tracks from GEMs into SPS to verify simulation
- Beam energy loss studies
- Production!

# Thanks To

The MUSE collaboration,  
Ed Bartz,  
and John Doroshenko
